

Beautifully crafted modular acoustic rooms ideal for music practice, tuition, production and broadcast

As exclusive UK distributor, Amadeus is proud to present acoustic rooms by BOXY - a cost effective, modular construction that provides high levels of attenuation perfectly suited for educational and commercial environments.

Amadeus is committed to providing educational establishments, musicians, production companies and studios exemplary quality facilities that truly represent value for money.

Beautifully designed and crafted, these demountable rooms provide any establishment with professional units that pack a high attenuation punch – from the simplest solution, the E Series, that fully meets school construction legislation for acoustics (BB93), up to the BM Series that boasts attenuation and noise reduction levels suitable for high calibre broadcasting and post-production work.

With space often at a premium you sometimes need to refurbish or rebuild to provide your music or production department with the facilities it needs. The flexibility of the BOXY demountable rooms offers you a bespoke solution that allows you to site these modular rooms in a temporary space while you develop your building programme.

These extraordinary rooms can then be demounted and moved into your new space. B Series rooms can even be reconfigured so that every element is reused with no material wasted.

A number of businesses have installed these rooms for commercial and industrial purposes such as containing unwanted noise from heavy machinery, providing sound-proof meeting rooms for confidential business discussions and even as an A&E medical training facility at Manchester Metropolitan University.

Amadeus Acoustic Solutions has over 15 years' experience providing professional consultancy, and specifying, supplying and fitting acoustic products that meet legislative and budgetary requirements.

Their client portfolio includes high profile names such as:

- Royal College of Music
- Glasgow Music Studios
- Royal Northern College of Music
- Sarm Music Studios
- Bedstone College
- Birmingham City University
- Dragon School
- Terminal Studios
- Oxford University
